The above tables outline the maximum variations that Breezway will warrant per wind pressure. Exceeding these constraints will void this Warranty. The limitations have been generated through Australian Standard AS2047 test results generated in a National Association of Testing Authorities (NATA) approved testing laboratory and over 60 years of experience manufacturing louvre windows. The design constraints below only apply to product sold as a fully assembled Louvre Window System with Altair® Aluminium Blades or glass blades to Breezway's specifications that is maintained according to the Breezway "Louvre Care and Maintenance" instructions.

For commercial applications, please consult Breezway with your specific project requirements.

1. Design Wind Speed = Serviceability Limit State Wind Pressure / Design Wind Pressure / Permissible Stress. The ability of the window to perform the intended function under normal service conditions avoiding excessive deflection or the appearance of buckling.

2. Ultimate Wind Speed = Ultimate Limit State Wind Pressure / Ultimate Strength Pressure. The maximum load carrying resistance

of the window. Subjecting the window to wind pressures in excess of the Ultimate Wind Speed is likely to result in the window collapsing.

3. Maximum blade lengths apply regardless of whether annealed glass, toughened glass or aluminium blades are used. Glass blades must be 6mm thick and straight and flat within 0.35mm/m.

4. Using the Stronghold System for 152mm blade lengths greater than 900mm The Stronghold System is an optional feature of the Altair Louvre Window which mechanically fixes the blades into the clips. These mechanical fixings enable bay widths of up to 1200mm to be achieved in some regions. In other regions, the ULS and Water Pass requirements of AS2047-2014 prevent these wider bay widths from being warranted. Easyscreen, or Altair Component System High Profile Sills and standard heights are required.

Product Performance Warranty for Slimline™ Window Systems

Max Louvre Heights include top and bottom Altair Weatherstrips.

1. Design Wind Speed = Serviceability Limit State Wind Pressure / Design Wind Pressure / Permissible Stress. The ability of the window to perform the intended function under normal service conditions avoiding excessive deflection or the appearance of buckling.

2. Ultimate Wind Speed = Ultimate Limit State Wind Pressure / Ultimate Strength Pressure. The maximum load carrying resistance of the window. Subjecting the window to wind pressures in excess of the Ultimate Wind Speed is likely to result in the window collapsing.

3. Maximum blade lengths apply regardless of whether annealed glass, toughened glass or aluminium blades are used. Glass blades must be 6mm thick and straight and flat within 0.35mm/m.

4. Using the Stronghold System for 152mm blade lengths greater than 900mm The Stronghold System is an optional feature of the Altair Louvre Window which mechanically fixes the blades into the clips. These mechanical fixings enable bay widths of up to 1200mm to be achieved in some regions. In other regions, the ULS and Water Pass requirements of AS2047-2014 prevent these wider bay

widths from being warranted. Easyscreen, or Altair Component System High Profile Sills and standard heights are required.

5. Heavy Duty Mullions are not available with the Altair Component System. Heavy Duty Mullions can only be used within Breezway Window Systems.

6. The Altair Component System Product Performance Warranty is applicable only when Breezway Altair Weatherstrips are used and the system is installed in accordance with Breezway recommended installation procedures.

Warranty

Your Louvre windows from Breezway are warranted against defects arising from faulty workmanship or materials for up to seven (7) years from the date of receipt of goods, provided the following conditions are met.

- a. The product is installed in accordance with the manufacturer's Product Performance Warranty, written installation specification and with all relevant Standards.
- b. The product has been maintained according to Breezway and industry recommendations.
- c. The product has not been subject to misuse, physical abuse or neglect.
- d. Manufacturing standards and tolerances are not deemed defects, nor are industry variations in colour of aluminium, plastic and timber componentry.
- e. Breezway accepts no responsibility for glass breakage (except for faulty workmanship or materials), toughened and float glass is guaranteed against defects and degradation for three (3) years (if supplied by Breezway).
- f. Moving parts, which wear out as part of normal use, are guaranteed for seven (7) years. All electrical components are guaranteed for three (3) years.
- g. This Guarantee is limited to the repair or replacement of the faulty product at the company's discretion, but does not extend to the installation or refinishing of a replacement product.
- h. Only repairs carried out by Breezway personnel or authorised agents are covered by this Guarantee.
- i. Claims under this Guarantee should be made within one month of the defect arising in the product. Copies of documentation showing the purchase date of the product should be included with your written claim and forwarded to the nearest Breezway office.

The Guarantee is in addition to all other rights and remedies in respect of this product to which you are entitled under the local laws.

Care And Maintenance

Maintaining Aluminium Finishes

Regular maintenance of the surface finish will be necessary to reduce the rate of weathering. The frequency of cleaning will depend on the environmental conditions, but as a guide should be done at 3 monthly intervals, or more frequently in aggressive coastal or industrial environments.

- Remove loose deposits by gently brushing or hosing.
- Clean using a sponge or soft brush and warm water with a mild detergent. Avoid cleaning agents with a caustic base, abrasive materials or harsh chemicals.
- Rinse with clean water.
- Dry with a chamois (optional).
- Apply a 'non-abrasive' car polish to maintain the lustre of the finish (optional).

Glass Maintenance

For best results glass blades should be regularly cleaned with mild, non-abrasive detergents. Low e glass blades should be installed with the coated side facing to the inside of the building and should only be cleaned with mild, non-abrasive detergents. Abrasive detergents or cleaning tools will visibly damage the low e coating.

Louvre Maintenance

It is recommended that inspection be carried out at the time of installation and then at yearly intervals. This may be required more frequently depending upon the variation of location, and environmental conditions.

Inspection and checks

- Inspect all fittings and screw fixings for firmness.
- Where handle connectors are used, inspect all pivot points of linkages, connecting links, pins and split pins and/or clips for wear and secure fixings.
- Ensure that all Stronghold System pins (if present) are firmly clicked in place.
- Check the louvre clips for any degradation over time.
- Check that the blade is firmly and safely positioned in the clips.
- Ensure all louvre blades operate freely.
- Ensure that seals are in place and clean.
- The Powerlouvre® Window should be operated at least once per month.

Lubrication

All internal louvre operating mechanisms are pre-lubricated, prior to assembly, with a clear lubricant where required. Under normal conditions this will be satisfactory for the life of the window.

Plastic Maintenance

When cleaning plastic components it is recommended to be done by wetting a cloth with a neutral cleaning agent such as a car wash without wax/polymer, or alternatively a mild furniture polish. Acidic or alkaline cleaning solutions, such as vinegar, detergents and glass cleaners should be avoided.

Selecting The Right Aluminium Finish

The aluminium components of Altair® Louvre windows are available in two different surface finishes: anodised or standard powder coating.

Powder coatings are polyester coatings from leading powder suppliers applied to a thickness of 50-80 µm and anodised finishes are to a thickness of 25 µm.

Over time, weathering of powder coated surfaces should be expected, resulting in a gradual change in appearance. This will be evident in loss of gloss, chalking, colour change and erosion of the powder coatings.

Selecting the right finish for the atmospheric conditions of the site and correct maintenance will be critical to the ongoing appearance of the finish. Note that industry accepted colour variation can occur during the aluminium anodising process.

Product	Film Integrity Warranty	Colour Integrity	Recommended End Use
Powder Coated	10 years	7 years	Residential and Light Commercial to 3 Levels; and more than 100 metres from any salt water or surf line
Anodised – 25 µm	10 years	10 years	Suitable for all environments including; severe, industrial, coastal or tropical environments

Energy Efficiency

Breezway Altair® Louvre Windows can help to enhance the energy efficiency and comfort of a building by offering:

Maximum ventilation

With no fixed panes and blades that open almost fully horizontally (88°) Altair Louvre Windows welcome fresh, cooling breezes. These cooling breezes reduce the need for power hungry electric air conditioning systems, thereby helping to save our fragile environment.

Tight Sealing

Altair Louvre Windows have an air infiltration rating that is significantly better than the standard required for residential windows. Tight sealing reduces draughts thereby allowing heating and cooling systems to run more efficiently.

Choice of Glazing

A variety of energy efficient glazing options can be used to meet local requirements. For example, toned glass blades reduce the amount of hot sunlight that enters a building and the improved insulating properties of low e glass blades offer thermal performance comparable to clear double glazing.

Energy ratings of most windows sold in Australia can be found in the Window Energy Rating Scheme (WERS) website, www.wers.net. In Southeast Asia's warm, tropical climate the shading offered by tinted glass or aluminium blades will reduce the solar heat gain through those windows thereby reducing the temperatures within a building. Clear low e glass can similarly reduce the solar heat gain when clear glass is preferred. Low e glass blades offer insulating properties similar to those achieved by windows with clear double glazing.

Airborne Sound Isolation

Size	Sound Transmission Loss	Blade Material
2100 h x 800 w	R' w. 28	Toughened Glass
2400 h x 840 w	R' 45, w. 27	Toughened Glass
2400 h x 840 w	R' 45, w. 25	Aluminium

The Altair Louvre window system has been field tested for sound transmission loss.

The tests were conducted independently by a member firm of the Association of the Australia Acoustical Consultants.

The tests were carried out on Altair windows 2400 high x 840 wide. The windows comprised of a Breezway Louvre Windows aluminium surround frame complete with 152 Altair louvres. The 2400 high windows consisted of louvres of 16 operable blades with a fixed extension blade.

The results of these field tests gave the following sound transmission loss.

Altair® Louvres Description and Functions

- Worldwide patents approved.

Extruded "T" shaped aluminium operating bars provide a strong, non corrosive, durable and smooth operating mechanism. It also adds extra security as the bars operate to the outside of the channel at all times.

For long and maintenance free use the operating and over centre locking mechanisms are manufactured from non-corrosive material, including all rivets and fasteners.

Injection moulded bearings made of acetal use the living hinge concept to pull the louvre blade against the channel as the window is closed. This results in higher resistance to water and air. Security is now increased by interlocking teeth in the bearing retainer. (Tested to over 40,000 open/close cycles)

The Altair Louvre channel is made from 6060-T5 extruded aluminium.

Clips are manufactured from UV stabilised polypropylene. The clip colour is solid throughout. Primary and secondary drainage channels within the louvre clips direct the flow of any water to the outside of the building. Colour matching is available for Breezway Standard Colour range.

The handle is made entirely from a UV stabilised acetal. This makes it not only non corrosive, but ideal for commercial areas, as it will spring back to position, even when bent severely. For other handle options see the Altair Handles section. Colour matching is available for Breezway Standard Colour range.

Altair® Louvre Systems

Altair Louvres are available in either the fully integrated Easyscreen™ Window System, the Slimline™ Window System, the ios™ Window System (Philippines Only), or a Component System for other frames.

Louvre Window System

Altair Powerlouvre in a Breezway Easyscreen™ Frame. (ex. Australia)

Louvre Window System

Altair Louvres in a Breezway Slimline™ Frame.

Louvre Window System

Altair Louvres in an ios™ Frame (Philippines Only).

Louvre Component System

Altair Louvres used in other Framing System.

Altair® Louvre Gallery Features

Gallery Type Options

- Single Operating Mechanism
- Powerlouvre™ (only available in the Easyscreen Window System)
- The Stronghold™ System

“Standard” Inclusions

- Handle control: Left; single operating (viewed from inside);
- Standard Handle;
- Standard Heights;
- Clips: Suit 6mm blades;
- Screw Holes: With or without.

“Off Standard” Features Available

- Handle Control: Right, single operating (viewed from inside);
- Low Profile Handle;
- Additional Handle or Variable Handle: e.g. 8 Blade with two handles;
- Ring Handle (A13);

Off Standard Louvre Gallery Heights (Extended Channel)

It is recommended that, wherever possible, Altair Louvre Windows should be designed to a standard height. This will reduce the product cost and ensure effective opening of all blades.

In some circumstances this may not be possible. In these instances the Altair Louvre can be ordered with Extended Channel. The Extended Channel is a continuation of the channel that is cut to size, giving improved appearance and water performance in comparison to an add-on extension piece.

The Louvre is supplied with an Extended Channel that can be cut back to the required height. Note that the part to be cut down is located at the top of the gallery.

Off-standard heights within 5mm of a standard height do not need a fixed blade but the shrouds of the top clips may need to be trimmed for off-standard heights between 5mm and 2mm below a standard height.

Off-standard heights that are not within 5mm of a standard height will be fitted with a top fixed blade. For example, the louvre illustrated is ordered as 3 blade with Extended Channel.

Handles

Standard Handle

- Acetal handle
- Ergonomic design for comfortable use

Low Profile Handle

- Stainless steel handle
- Substitute for Standard Handle when inserting into bi-folding & sliding door panels

Powerlouvre™ Gallery*

- Concealed motors and connectors for use with Remote Window Control Systems

152 Louvres:

Overall clip size = 171mm
Clip projection = 66mm

102 Louvres:

Overall clip size = 121mm
Clip projection = 41mm

*Available ex. Australia only.

Ring Handle (A13)

- Stainless steel handle for manual operation with Breezway Map Rod when installed out of reach

ios™ Inside Screen Slide Handle (Philippines Only)

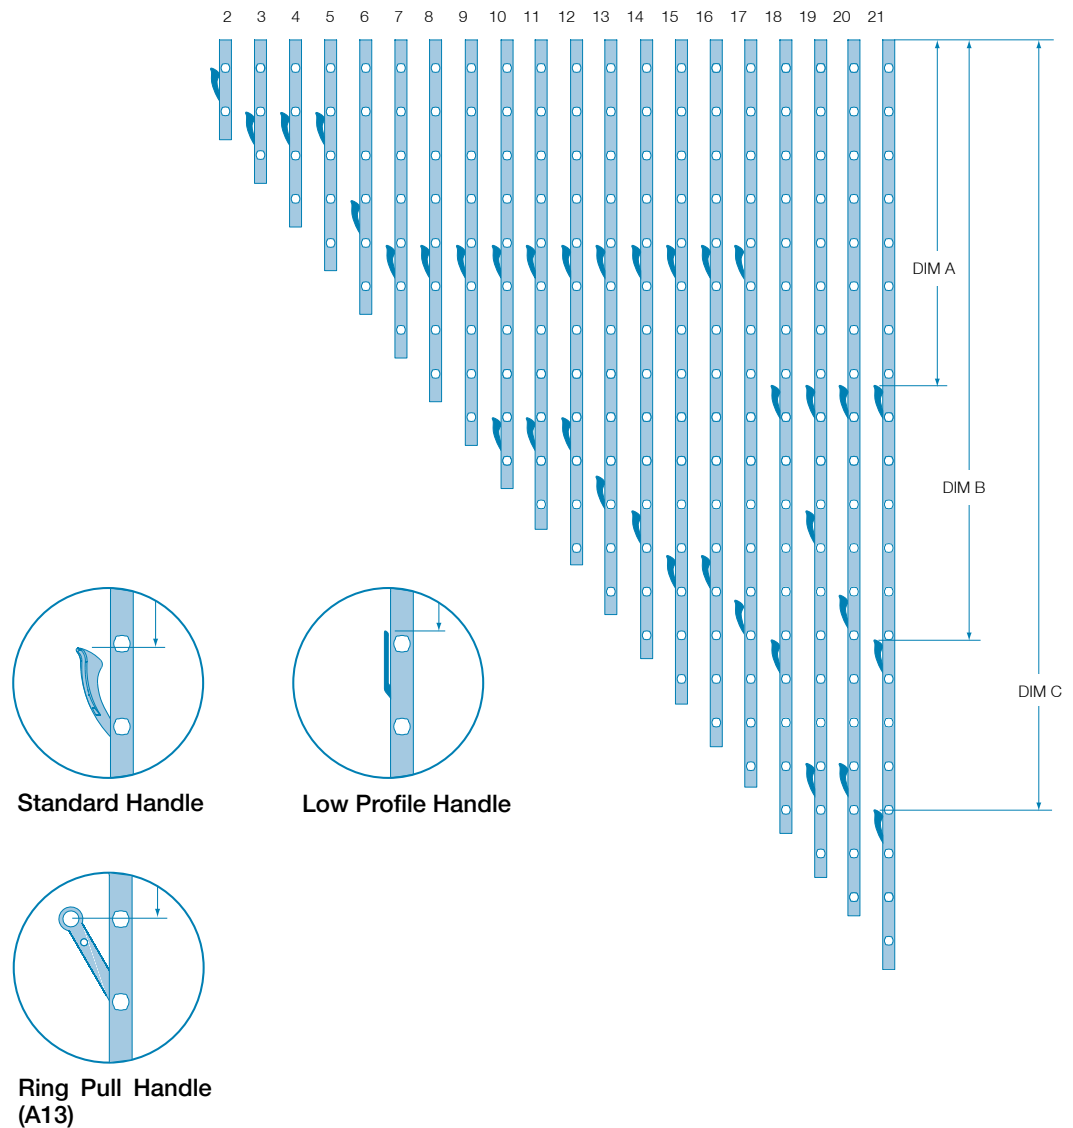

- Acetal handle
- For manual operation with inside screen ios Window System only
- Should not be operated using a pole

Altair® 152mm Louvre Standard Handle Positions

Formulas for Other Handle Positions

- Low Profile Handle Position = Standard Handle Position – 3mm

Formulas for Positions of Non-Standard Handles

- Low Profile Handle Position = Standard Handle Position – 8mm
- Ring Handle Position = Standard Handle Position +19mm*

* For 3 and 4 blade galleries: Ring Pull Handle position

= Standard Handle Position –75mm

** For 3 and 4 blade galleries handle position

= Standard Handle Position –48mm

Extruded Aluminium Blades

Refined Design

- Aluminium blades in solid colours can bring a sharp, modern aesthetic to your design and provide shading and privacy benefits.

Altair® Louvre Window Systems

Easyscreen™ Window System

Slimline™ Window System

ios™ Window System (Available in Philippines Only)

Choice of Frames

Easyscreen (131mm), Slimline (52mm), or ios (130mm) Surround Frames are available. A wide range of powdercoat colours with matching handles and clips are available.

Custom Designed for Altair Louvres

Altair Louvres clip neatly into the frame with no visible gallery screws.

Durable

Constructed entirely of non-corrosive materials including 6060-T5 aluminium, stainless steel and industrial strength acetal and polypropylene plastics.

Strong

Structural components of the window system are manufactured from 6060-T5 aluminium alloy.

Supply of Extras

Reveals and flashing are available as an option. Breezway is able to supply smooth polished glass blades.

High Performance

Breezway Window Systems are purpose designed Louvre Window Systems. All frames are produced to AS2047-1999 and NZS. 4211-1985. See our Product Performance Warranty for ratings information.

Easyscreen™ Window Systems

Easyscreen™ Window System

Automated or Manual Options

With the optional Altair Powerlouvre™ Window System, Altair louvres can be automated via a motor concealed within the Easyscreen Window System.

Screen Housing

The Breezway Easyscreen Window System includes an integrated insect and security screen housing that allows easy fitting of screens to the frame. Screens can be installed from within the building and are positioned so that they will not interfere with the operation of the louvre blades. (Screens supplied by others).

Security Options

Integrated security bars are available as an option within the Easyscreen Window Frame. Security screens can be fitted into the Easyscreen Window System's screen housing.

Glazing Options

The Easyscreen Window System can facilitate both louvre and fixed lite configurations, allowing for horizontal louvre fixed lite combinations in a single frame.

Easyscreen™ with D Bar

The Easyscreen Window System with optional integrated D bar security system. To suit 152mm louvre only. Longer lead times may apply, please contact your Breezway representative for more details.

Easyscreen™ with Fixed Lite

The Easyscreen Window System can facilitate 5mm and 6mm fixed lite glazing, allowing for louvre fixed lite combinations. Recommended fixed lite glass sizes will display on Breezway quote confirmations.

Powerlouvre™ Window Motor

The Powerlouvre Window motor is neatly concealed within the Easyscreen Window System.

Easyscreen™ Louvre Window System Dimensions

Easyscreen™ Fixed Lite Window System Dimensions

Easyscreen™ Window System Accessories

Easyscreen Coupler

Couple Easyscreen Window Systems together. (2mm extra height or width)

Easyscreen Cover Plate

When the Easyscreen Window System extends beyond the building frame, a cover plate can be used to trim the assembly. (2mm extra height or width)

Easyscreen™ Window System Mullion

NOTES:

Design Registrations apply.

Slimline™ Window System

Slimline Window System

Custom designed for Altair Louvres

Altair Louvres clip neatly into the frame with no visible gallery screws.

Durable

Constructed entirely of non-corrosive materials including 6060-T5 aluminium, stainless steel and industrial strength acetal and polypropylene plastics.

Strong

Structural components of the window system are manufactured from 6060-T5 aluminium alloy.

Slimline™ Window System Dimensions

Example shows the Glass / Aluminium Fixed Blade Carrier. A Timber Fixed Blade Carrier is also available.

Medium Duty Mullion

ios™ Window System (Philippines Only)

NOTES:

- Slimline windows with multiple bays and heights of over 10 and 16 blades respectively for 152mm Galleries will require Heavy Duty Mullions.
- Off-standard heights that are not within 5 mm of a standard height have a fixed blade at the top to achieve the specific height.
- Refer to the product performance warranty on possible height restrictions for different blade types and bay widths.
- Standard sizes will save money and improve lead times.
- Maximum width = 4000mm (frames over these dimensions will need to be coupled together on site or at a window fabricator's factory).
- Up to 6 bays (sets of galleries) can be included in a single surround frame.
- Window Systems with Fixed Galleries consist of 152mm clips and blades. Fixed galleries are permanently fixed with the blades at a 45 degree angle.
- Window Systems with Fixed Galleries do not meet water penetration requirements.
- Window Systems with Fixed Galleries are only available in standard heights.

Maximum Bay Widths For Standard Sizes

This table indicates the maximum Easyscreen™ Window System width that Breezway will warrant, per wind category.

Blade Type		Easyscreen Window System Widths (mm)				
		1 bay	2 bay	3 bay	4 bay	5 bay
Up to 1000Pa Design Wind Speed	Glass, Aluminium - 152mm	982	1959	2936	3913	4000
	Glass, Aluminium - 102mm	832	1659	2486	3313	4000
Up to 1500Pa Design Wind Speed	Glass, Aluminium	832	1659	2486	3313	4000
Up to 2200Pa Design Wind Speed	Glass, Aluminium	682	1359	2036	2713	3390

Maximum Window System Dimensions (Before Coupling).

Maximum Dimensions supplied in one continuous window are 3061mm high x 4000mm wide

This table indicates the maximum Slimline™ Window System width that Breezway will warrant, per wind category.

Blade Type		Slimline Window System Widths (mm)				
		1 bay	2 bay	3 bay	4 bay	5 bay
Up to 1000Pa Design Wind Speed	Glass, Aluminium - 152mm	977	1954	2931	3908	4000
	Glass, Aluminium - 102mm	827	1654	2481	3308	4000
Up to 1500Pa Design Wind Speed	Glass, Aluminium	827	1654	2481	3308	4000
Up to 2200Pa Design Wind Speed	Glass, Aluminium	677	1354	2031	2708	3385

Maximum Window System Dimensions (Before Coupling).

Maximum Dimensions supplied in one continuous window are 3035mm high x 4000mm wide

This table indicates the maximum ios™ Window System width that Breezway will warrant, per wind category (Available in Philippines Only).

Blade Type		ios Window System Widths (mm)				
		1 bay	2 bay	3 bay	4 bay	5 bay
Up to 1000Pa Design Wind Speed	Glass, Aluminium - 152mm	977	1954	2931	3908	4000
	Glass, Aluminium - 102mm	827	1654	2481	3308	4000
Up to 1500Pa Design Wind Speed	Glass, Aluminium	827	1654	2481	3308	4000
Up to 2200Pa Design Wind Speed	Glass, Aluminium	677	1354	2031	2708	3385

Maximum Window System Dimensions (Before Coupling).

Maximum Dimensions supplied in one continuous window are 3036mm high x 4000mm wide

NOTES:

Frames over 4000mm wide will need to be coupled on site or at the window fabricators factory.

An additional 2mm will be included onto the overall window height & width with each Coupler or Cover Plate added.

Altair® Powerlouvre™ System

The Powerlouvre Window motor is neatly concealed within the Easyscreen™ Frame.

Automated Windows

Automated windows allow integration of passive ventilation into automated climate control systems and also offer an easy way to operate windows that are high up and out of reach.

Durable Construction

Manufactured from 6060-T5 extruded aluminium for strength and long, low-maintenance life.

Integrated Motor and Gearbox

The Breezway Altair Powerlouvre Window incorporates a motor and gearbox concealed within the Easyscreen Window Frame, resulting in an automated louvre window with no visible motors, rods or arms.

Integrated System

Altair Louvres clip neatly and flush against the frame, with no visible gallery screws. Security bars can be integrated as an optional extra.

Integrated Screen Housing

The Breezway Easyscreen Window System includes an integrated insect and security screen housing that allows easy fitting of screens to the frame. Screens can be installed from within the building and are positioned so that they will not interfere with the operation of the louvre blades. (Screens supplied by others).

Powerlouvre™ System Operating Condition

Tests Passed	
Cyclical open / closed	30,000 cycles
Salt mist	1,000 hours
Extreme humidity	90% humidity at 35 °C
Extreme heat	60 °C
Extreme cold	0 °C
Electromagnetic Compatibility	Complies with the requirements of EN61000–6–3 and AS/NZS 4251.1

Powerlouvre™ System Maintenance

Breezway Powerlouvre Windows should be operated at monthly intervals. Frames should be cleaned periodically as per Breezway care and maintenance recommendations.

Powerlouvre™ System Opening Configurations

Powerlouvre Windows that are 2-9 blades tall contain one motor per bay and are wired such that the entire window opens and closes simultaneously.

Powerlouvre Windows that are 10-18 blades tall contain 2 motors per bay, one motor drives the blades in the top half of the bay and the other motor drives the blades in the bottom half of the bay. Powerlouvre Windows with 10-18 blades are wired such that the top halves of all the bays open and close simultaneously and the bottom halves of all the bays open and close simultaneously. Labelled wires emerge 1 metre from the top right hand side of the Easyscreen™ frame.

Breezway Altair® Powerlouvre Window Opening Configurations		
No. of Blades	Motors per bay	Banks of Blades Controlled from Head Downwards
2	1	2
3	1	3
4	1	4
5	1	5
6	1	6
7	1	7
8	1	8
9	1	9
10	2	5 5
11	2	5 6
12	2	6 6
13	2	6 7
14	2	7 7
15	2	7 8
16	2	8 8
17	2	8 9
18	2	9 9

Electrical Requirements

- Operating voltage: 24V DC
- Maximum allowed voltage: 29V DC
- Maximum constant current: 0.25A per motor
- Maximum startup current: 0.4A per motor
- Opening time: Approx 14 seconds
- Working temperature: -20 to +60 degrees Celsius

Maximum Constant Current Requirements		
Powerlouvre Window Type	Motors per bay	Maximum Constant Current Required
2-9 Blades High Without Remote Control	1	0.25 amps per bay
10-18 Blades High Without Remote Control	2	0.5 amps per bay

The direction in which the Powerlouvre Window moves is determined by the polarity of the low voltage current supplied. Once the Powerlouvre Window has fully opened or fully closed, an electronic circuit stops power being delivered to the motors to prevent the motor being damaged should power be supplied continuously.

To **close** the Powerlouvre Window:

To **open** the Powerlouvre Window:

NOTES:

In extreme cold conditions the windows will not operate if there is excessive ice build up or if the louvre blades are frozen together.

Breezway Transformer

Breezway supplies transformers (as an optional extra) that have been specified to meet the particular requirements of Powerlouvre Windows.

- 240V AC current transformed to 2.9 amp, 24V DC constant current.
- Able to provide sufficient instantaneous startup current for up to 6 Powerlouvre Motors.
- Built-in overload protection to prevent accidental short circuits from damaging the transformer.

Controlling Powerlouvre™ Windows

Control options include:

- Breezway Powerlouvre Apptivate™ Advance Control Units, which allow control via a touch sensitive wall plate, remote control via a smartphone application, or automatic operation in response to temperature or timer events.
- Building management systems, which allow control along with other automated building products and automatic operation in response to various sensors and inputs.

Powerlouvre™ Apptivate® Advance Control Unit

The Powerlouvre Apptivate Control Unit is a plastic, touch-sensitive wall switch.

Features include:

- White, standard sized wall switch.
- Control of up to 12 Powerlouvre Motors on a single Control Unit.
- Fully open, fully close or open to an intermediate (half-open) position at a single touch.
- Precise control of opening angle by touching and then releasing when the window is in the desired position, or by touching another button to stop the window in the desired position.
- Automatic operation in response to an in-built temperature sensor.
- Bluetooth® LE module to allow control by and communication with compatible smartphones.
- Floating appearance, featuring a shadow line around the perimeter of the cover which allows it to visually stand off the wall.
- Wireless communication with the Breezway® Rain Sensor (Coming Soon).

Additional features accessible through the Powerlouvre™ Advance App:

- Remote control.
- Automatic operation in response to an in-built temperature sensor.
- Automatic operation in response to pre-set timers.
- 'Night mode' which adjusts the brightness of LED lights overnight to minimise potential sleep disruptions.
- Over the air firmware updates to the Apptivate Advance Control Unit when updated versions become available.

Apptivate® Advance Control Unit

Powerlouvre™ Advance App

The Apptivate® Advance Control Unit includes a Bluetooth® LE module which allows wireless communication between a compatible device running the Powerlouvre Advance App and the Apptivate Advance Control Unit.

Remote control.

The Powerlouvre app enables:

- Remote opening and closing of each Apptivate Advance Control Unit. The range of the Bluetooth signal is approximately 10m - 20m. (The range will be maximised by maintaining a clear line of sight between the device running the Powerlouvre App and the Apptivate Advance Control Unit.)
- Naming of Apptivate Advance Control Units for easy identification.
- An indication of the open/close position of the Powerlouvre Windows connected to each Apptivate Advance Control Unit.

Compatible devices.

Compatible devices will have Bluetooth® LE modules installed and have an iOS or Android operating system.

Devices include:

- Apple products running iOS 12 or newer.
- Devices running Android 10 or newer.

Security.

Establishing associations between the Powerlouvre Advance App and Apptivate Advance Control Units requires:

Close physical proximity between the Powerlouvre Advance App and the Apptivate Advance Control Unit, and;

An access code (defined by the first Powerlouvre Advance App to be associated to the Apptivate Advance Control Unit). For first time connections the PIN will be '0000'.

If the Access Code is forgotten, a factory reset button can be activated by snapping off the front cover plate of the Apptivate Advance Control Unit and hold the reset button down for a 5 seconds. Additionally, holding the reset button for 10 seconds will reset the Apptivate Advance Control Unit to its factory settings.

Security will be maximised by positioning the Apptivate Advance Control Unit in a location that restricts unauthorised access.

Automatic operation in response to temperature.

Temperatures can be set at which the Apptivate Advance Control Unit will:

- Automatically open the windows to naturally cool the room, or
- Automatically close the windows to retain warmth within the room.

Automatic response to temperature can be enabled or disabled:

- Remotely from the Powerlouvre Advance App, or
- Directly on the Apptivate Advance Control Unit.

NOTES:

- As the temperature sensor will be located within the wall cavity it may be susceptible to environmental conditions so the temperature readings will be indicative of the air temperature within the room, but will not exactly reflect the air temperature within the room.

Powerlouvre™ Advance App

Automatic operation in response to timers

Timer events (time of day and day of week) can be set to:

- Open the windows
- Move the window to an intermediate position
- Close the windows
- Begin responding automatically to temperatures.

This allows the windows to be set to operate in anticipation of the building occupant's daily routine. For example, opening before employees arrive to pre-cool the building, or responding to temperatures from when a homeowner goes to bed so that the windows close when the temperature drops in the early hours of the morning.

Timer events can be enabled or disabled:

- Remotely from the Powerlouvre™ Advance App, or
- Directly on the Apptivate® Advance Control Unit.

Control of multiple Apptivate® Advance Control Units

Up to 10 Apptivate Advance Control Units can be associated to each Powerlouvre App allowing building occupants to control windows around their home from their Powerlouvre App. Some mobile devices may have Bluetooth connection limits that reduce this number.

For ease of identification:

- Each of the Apptivate Advance Control Units can be given a customised name.
- The Powerlouvre App will indicate any Apptivate Advance Control Units which are out of range, or with which a Bluetooth® LE connection cannot be made.

For maximum control and ease of use, all the Apptivate Advance Control Units associated to a Powerlouvre Advance App can be operated simultaneously or independently.

Control by multiple Powerlouvre™ Advance Apps

Associations can be established between multiple Powerlouvre Advance Apps and each Apptivate Advance Control Unit, to allow all family members to control the windows from their smartphones.

NOTES:

- Only one Powerlouvre Advance App will be able to maintain an active Bluetooth® LE connection with an Apptivate Advance Control Unit at any given time. A second device can take control if the initial device is inactive with the screen on for 60 seconds, or 10 seconds if the initial device's screen is off, or the App put to sleep.

Apptivate® Advance Control Unit Standard Wiring

Powerlouvre Motors and Apptivate Advance Control Units require 24V DC power. For ease of wiring the Apptivate Advance Control Unit senses the polarity of the current provided from the transformer and automatically adjusts accordingly.

Up to 12 Powerlouvre Motors can be wired to each Apptivate Advance Control Unit. It is recommended that transformers are located in a position that enables easy power cycling.

NOTES:

- The Apptivate Advance Control Unit is incompatible with some switch mode transformers due to high levels of electrical noise (eg Meanwell GS40 series).

Building Management System Compatibility

The Altair® Powerlouvre Window System has been reviewed for compatibility by the leading suppliers of building management systems. When considering integration into a building management system, the following should be considered:

- Breezway does not supply the various sensors which could be used to instigate opening or closing of the windows (eg temperature or rain sensors).
- Transformer requirements may differ from the requirements of Powerlouvre Windows controlled by Apptivate Advance Control Units.
- The Powerlouvre Window System does not include an inbuilt electronic mechanism to inform the building management system of its current open or close position.
- Powerlouvre Motors include limit switches which prevent the motors from continuing to attempt to open or close the window once the window is fully open or fully closed, thereby preventing damage to the motors and electronics.

Apptivate Advance Control Units are not compatible with building management systems.

Cabling Requirements

NOTES:

Max of 6 Motors per 2.9 amp transformer.

Multiple Windows in parallel

Wire Size	Max Distance from Power Supply to Motor in metres Number of Motors (1 - 12)

Altair® Louvre Window System Recommended Specifications

A tight specification will help to make sure that what you specify ends up in your building thereby achieving your design objectives.

The louvre windows shall be Breezway® Altair® Louvre Windows

Unique features:

- Unique drainage channels for superior water performance.
- Unique 'Living Hinge' design that pulls the clips tightly against the channel when closed for superior water performance and air infiltration.
- Passed testing to 40,000 open/close cycles for long operational life.
- Altair Louvres have passed AS2047 testing at 3,000mm high.

The louvre windows shall be Breezway® Altair® Powerlouvre™ Windows

Unique features:

- Unique drainage channels for superior water performance.
- Unique 'Living Hinge' design that pulls the clips tightly against the channel when closed for superior water performance and air infiltration.
- Motors are concealed within the head of the window frame.
- Motors are easily accessible for maintenance.
- Each low voltage motor only requires 0.25 amps to reduce transformer and wiring requirements.
- Motors can be powered by appropriately specified transformers from any supplier.
- Controlled by touch sensitive Appivate Advance Control Units and the Powerlouvre Advance App, enabling automatic operation in response to timer events or an in-built temperature sensor.

The louvre windows shall be Breezway® Altair® Louvre Windows with the Stronghold™ System

Unique features:

- Unique drainage channels for superior water performance.
- Unique 'Living Hinge' design that pulls the clips tightly against the channel when closed for superior water performance and air infiltration.
- Altair Louvres have passed testing to 40,000 open/close cycles for long operational life.
- Altair Louvre keylocks have passed testing to 15,000 lock/unlock cycles for long operational life.
- Altair Louvres have passed AS2047 testing at 3,000mm high.
- Pinned design that mechanically retains blades within the clips to prevent blade dislodgement under human impact.

The louvre windows shall be Breezway® Altair® Powerlouvre™ Windows with the Stronghold™ System

Unique features:

- Unique drainage channels for superior water performance.
- Unique 'Living Hinge' design that pulls the clips tightly against the channel when closed for superior water performance and air infiltration.
- Motors are concealed within the head of the window frame.
- Motors are easily accessible for maintenance.
- Each low voltage motor only requires 0.25 amps to reduce transformer and wiring requirements.
- Motors can be powered by appropriately specified transformers from any supplier.
- Pinned design that mechanically retains blades within the clips to prevent blade dislodgement under human impact.

Altair® Louvres with the Stronghold™ System

NOTES:

Patented design.

Louvre blades are mechanically retained within the clips by the Stronghold System.

Blade Retention System

Blades are retained in Stronghold Clips by a pin that passes through the clips, bearing and blade. Once installed, the pins cannot be removed without tools and the blades are prevented from being removed from the clips. Pins are visible on the inside/underside of the clips.

High Rise Applications

Breezway Altair Stronghold Louvres are fit for purpose for installation more than 2 metres above ground level. As the entire glazed area can be opened to allow airflow they can be used to maximise natural ventilation and cooling in multi level applications. They are also ideal for creating winter gardens as they can be opened for ventilation in warmer weather or closed for protection in colder weather.

Frame Options

Altair Stronghold Louvre Windows are available as complete window systems within the Breezway Easyscreen™ and Slimline™ Window Systems, or in component form for installation into other manufacturer's framing systems.

Fall Prevention

Altair Louvre Windows with the Stronghold System are ideal for use in bedrooms, early childhood centres and other situations where there is a significant height from the window sill to the outside ground. With openings on both sides of every blade, they deliver real ventilation benefits for naturally cool, healthy and safe spaces. Performance is proven by successful testing to the Australian Industry Code of Practice "ICP.005 - Protection of Openable Window Testing Specification" and AS5203:2016.

Blade Options

Processed and toughened glass and processed aluminium blades can be used in the Stronghold System. Heat soak testing of glass blades already processed for use with the Stronghold System is also available. The Altair Stronghold System is available for use with both 152mm and 102mm high blades.

Blade Type Compatibility

	152mm High	102mm High
Annealed glass	N	N
Toughened glass	Y	Y
Aluminium	Y	Y

Powerlouvre™ System Compatibility

Altair Stronghold Clips are fully compatible with the Powerlouvre Systems and have no impact on minimum and maximum Powerlouvre Window sizes.

Maintenance

If blades need to be removed from an Altair Stronghold Louvre Window or if broken blades need to be replaced, the pins must be removed. The removal process requires tools and will destroy the pins so new pins will be required when blades are re-installed.

Compliance With Balustrading Requirements

The Stronghold System is a window, not a balustrade system. The Stronghold System has been tested to AS2047 “Windows in Buildings” and has completed static load, swing bag and sphere tests. Test reports are available from the Breezway website. It is the responsibility of the building designer to specify systems and products that meet the barrier and balustrade requirements for a building.

Window Sizes

Window Size Constraints

The Altair Product Performance Warranty size constraints for Ultimate Limit State Pressure, Serviceability Limit State Pressure and Water Pass must be adhered to in order to ensure compliance with AS2047.

Standard Heights

The standard heights of Breezway Window Systems with Altair Stronghold Louvres are identical to the standard heights of Breezway Window Systems with regular Altair Louvres.

Off-Standard Heights

It is recommended that, whenever possible, Altair Louvre Windows with the Stronghold System should be designed to a standard height. This will reduce the product cost and ensure effective opening of all blades.

Some off-standard heights are unavailable when using the 102mm Altair Louvre Galleries with the Stronghold System.

	Unavailable Off-Standard Heights when using 102mm Altair Galleries with the Stronghold System
Easyscreen Window System	Standard height + 26mm to standard height + 36mm
Slimline Window System	Standard height + 19mm to standard height + 30mm

Altair® Stronghold System Recommended Specifications

A tight specification will help to make sure that what you specify ends up in your building thereby achieving your design objectives.

The louvre windows shall be Breezway® Altair® Louvre Windows with the Stronghold™ System

Unique features:

- Unique drainage channels for superior water performance.
- Unique 'Living Hinge' design that pulls the clips tightly against the channel when closed for superior water performance and air infiltration.
- Pinned design that mechanically retains blades within the clips to prevent blade dislodgement under human impact.

- Motors can be powered by appropriately specified transformers from any supplier.
- Pinned design that mechanically retains blades within the clips to prevent blade dislodgement under human impact.

Altair® Louvres For Other Frames

In component form, Breezway Altair louvre galleries can be used in most regular timber, aluminium and uPVC window frames. In such instances, Altair galleries and weatherstrips are simply screwed or clipped into place within the window frame. If installed in a frame that is plumb and true, and according to Breezway's installation instructions, the Altair performance warranty applies in full.

Altair® Louvre Component System

Gallery	Mullion	Weatherstrip
Available in 102mm and 152mm heights to suit 6 mm thick glass or aluminium blades.	Medium Duty Mullion 38 x 25 Louvre Gallery simply clips to Mullion.	Standard Weatherstrip and Insert.

Standard Height Louvre Weatherstrip

- The same Weatherstrip is used on both the head and sill for standard glass and aluminium louvres.
- Weatherstrip, complete with seal, must be used to gain manufacturer's performance warranty.
- Altair Weatherstrip does not require notching to accommodate the louvre gallery.
- Weatherstrips to head and sill add 10mm to overall gallery height.
- Off Standard Height Galleries that are within 5mm of a Standard Height Gallery will not have a top fixed blade and will therefore require Standard Height Weatherstrip sets.

Off Standard Height Weatherstrip

Used in Conjunction with Extended Louvre Channel.

- Off Standard Height Galleries that are within 5mm of a Standard Height Gallery will not have a top fixed blade and will therefore require Standard Height Weatherstrip sets.

Off Standard Height Head for Glass or Aluminum Blades

- Off Standard Height Galleries that are more than 5mm greater than or less than a Standard Height Gallery will have a top fixed blade and will therefore require Off Standard Height Weatherstrip sets.

152mm Fixed Louvre

Applications for Fixed Vent Louvres

Use fixed vent louvres where permanent ventilation, light, privacy and a degree of weatherproofing is required. Some typical applications include:

- Vented roofs
- Laundries (industrial, domestic)
- Bathrooms
- Public Amenities
- Housing for air conditioning units

NOTES:

- Not Available in 102mm
- This product does not meet AS2047 water penetration requirements.
- Fixed louvres are only available in standard heights ie. extended channel not available.

Altair® Mullions

Altair Mullions can be secured from the outside of the window frame using the screw flutes, or secured from the inside of the frame using brackets. Installers are responsible for ensuring that appropriate fixings are used for the frame and site wind ratings.

Installation Instructions

Standard Height Gallery

Fixings

Off-Standard Height

1 Check frame to be true, drill holes in sill

2 Apply sealant to sill

3 Attach sill

4 Insert louvre galleries

5 Attach Louvre galleries

6 Insert and attach head section

7 Check galleries to be true and plumb (Standard Height Only)

8 Calculation of blade width (Standard Height Only)

7a Cut blade carrier to length (Off-Standard Height Only)

8a Assemble blade carrier and blade into galleries (Off-Standard Height Only)

8b Rotate blade and attach (Off-Standard Height Only)

9 Insert blades and close louvres (Off-Standard Height Only)

Life's better with Natural Ventilation
